

Constant Technologies, Inc.

# Multi-Site Capabilities and Collaborative Tech

## Introduction

Many organizations with mission critical operations centers have multiple site locations that need to communicate with one another. Whether it's across town or across the world, these sites need to be able to clearly collaborate and share vital information regardless of location.

Across all industries, the demand for collaboration technology has increased significantly in recent years. In a recent survey of AV integrators conducted by [Commercial Integrator](#), 61.5% of respondents reported that they are currently experiencing growth specifically related to the demand for collaboration technology. The reason why is simple: people are installing more of this kind of technology this year than last.

This growth in the integration of collaboration technology is a customer-driven change. More than ever, clients want to share information across locations simply, with a system that is easy to operate for the end user.

## Integrating Collaboration Technology

This is where an AV integrator like Constant Technologies comes in. While collaboration technology may appear simple, these systems are more complex than they seem – especially in mission critical environments, where so much rides on a successful project. An integrator can also help you determine what features you will need in technology

solutions to achieve your collaborative, multi-site goals.

At Constant, the collaborative technology that we integrate has multi-site capabilities with robust options for content sharing so that operators in different regions can join forces to collaborate on the same real-time information. For our clients with operations spread out over multiple locations, this is absolutely essential.

In these kinds of setups where multiple locations plan to coordinate with one another, it is important to keep consistent across installations. Outfitting multiple centers in different regions with the same look, feel, and technical implementation not only ensures that the technology cooperates across distance, but also creates a more comfortable experience for operators who many have to go from one center to another.

## Conclusion

When you're planning to implement a multi-site operation, there are a lot of factors to consider. From potential time zone differences to logistics and customs in [international installations](#) in addition to consistency and technological considerations, it could be easy to get lost in the details. That's why you need the help of an integrator that's known for significant attention to detail and over-delivering on service. An integrator like Constant.

With decades of experience in the mission critical field, Constant has created countless custom, turnkey operations centers for our

clients across the globe. Across multi-site installations, our operations centers are consistent in design and tech specs so that both the design and technical function feel familiar across all sites.

If you are planning to implement multi-site capabilities, Constant can guide you through the process. Reach out today to learn more and receive a free design consultation to explore possibilities for layout, AV video wall integration, and operations center furniture.

## About Constant

Constant Technologies, Inc. is a premier mission critical systems integrator providing customized audiovisual integration of large scale operations center video walls and control center console furniture worldwide. With over three decades of experience, Constant's team has the knowledge and clearance to work with sensitive environments in both the public and private sectors and has implemented turnkey solutions all over the world. Constant designs, installs and services projects of all scopes and sizes to create solutions with the highest levels of security, aesthetics and functionality in mind. Some of Constant's installations include: EOC builds, Network Operations Center design, Fusion Centers, Security Operations Centers, Control Room Design, Social Media Command Centers, and other command and control environments.
